### DETAILED ACTION

Amendment A, filed May 5, 2003, has been entered.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 5-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Justel et al. (US 6559598).

Justel discloses a vacuum ultraviolet radiation excited light-emitting device with a discharge space filled with a rare gas between a front faceplate (3) and a rear faceplate (2), a fluorescent material layer (8) provided on the front faceplate having a thickness of no more than about 7 um (column 7, lines 25-40).

Regarding claim 2, Justel discloses a fluorescent material (10) layer on the rear faceplate.

Regarding claim 3, Justel discloses a rare gas lamp.

Regarding claim 5, Justel discloses a plasma display panel.

Regarding claim 6, Justel discloses a fluorescent material layer (8) provided on the front faceplate having a thickness of no more than about 7 um (column 7, lines 25-40).

Art Unit: 2879

Regarding claim 7, Justel discloses the average primary particle diameter of not more than about 1 um.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Justel et al. (US 6559598) in view of Seibold et al. (US 6469435).

Justel discloses all of the above claim limitations but fails to clearly point out the fluorescent material layer on the rear plate having a thickness of not less than about 30 um.

Seibold discloses a fluorescent material layer on the rear plate having a thickness of not less than about 30 um in order to obtain optimum conversion of UV light to visible light.

Hence it would have been obvious to one of ordinary skill in the art at the time the invention was made to use the display of Justel with the fluorescent material layer on the rear plate having a thickness of not less than about 30 um in order to obtain optimum conversion of UV light to visible light, as taught by Seibold.

***Response to Arguments***

Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2879
